## PROFESSIONAL SUMMARY

- **DevOps & Cloud Infrastructure Engineer** with 2+ years of enterprise experience at **Hewlett Packard Enterprise (HPE)**, specializing in production reliability, Kubernetes, and automation.
- Administered 100+ bare-metal and hybrid-cloud enterprise server nodes, sustaining **99.9% production availability SLA** across high-availability environments.
- Automated operational workflows by developing Python scripts and **FastAPI REST APIs**, cutting manual maintenance effort by **35%**.
- Skilled in centralized observability (ELK/Prometheus), telemetry diagnostics, and Root Cause Analysis (RCA)—reducing incident **MTTR by 25%**.
- Built autonomous AI-powered SRE monitoring systems leveraging the **Model Context Protocol (MCP)**, DeepSeek AI, and automated failure remediation.

## SKILLS

**DevOps** | Git • GitHub • CI/CD • Jenkins • GitHub Actions • Docker • Kubernetes • Helm • Terraform • Ansible
**Foundations & Cloud** | Linux (RHEL, Ubuntu) • Networking • Bash • Python • YAML • AWS (EC2, S3, IAM, VPC) • GCP • HPE GreenLake
**Monitoring & SRE** | Prometheus • Grafana • ELK Stack / Loki • Alerting • Observability • Log Analysis • RCA • Incident Response
**Backend & Tooling** | FastAPI • REST APIs • Flask • Redis • Pytest • Model Context Protocol (MCP) • Infrastructure Automation
**Security & Operations** | Cloud IAM • RBAC • DevSecOps • Trivy • Production Support • Troubleshooting • Disaster Recovery

## WORK EXPERIENCE

### Hewlett Packard Enterprise

*Technical Solutions & Development Specialist (DevOps & Infrastructure)* **Jan. 2025 – Present**

- Managed enterprise HPE server infrastructure, ensuring **99.9% system reliability, availability**, and performance across production environments.
- Diagnosed and resolved infrastructure issues through centralized log analysis (ELK/syslog) and root-cause analysis (RCA), cutting **MTTR by 25%**.
- Automated operational tasks and server audits by developing Python scripts and **FastAPI REST APIs**, reducing manual sysadmin effort by **35%**.
- Partnered with infrastructure, development, and support teams to standardize CI/CD deployment pipelines and support zero-downtime releases.

*Cloud Infrastructure & Automation Engineer* **Feb. 2024 – Dec. 2024**

- Supported Identity and Access Management (IAM) services, secure authentication, and least-privilege RBAC provisioning for **500+ enterprise cloud accounts**.
- Developed Python scripts and scheduled Bash jobs to automate operational auditing tasks, reducing manual effort and saving **15+ hours weekly**.
- Performed telemetry log analysis and root-cause investigation to troubleshoot cloud authentication bottlenecks and permission drift.
- Collaborated with security and operations squads on system configuration, user access management, and cloud deployment governance.

## PROJECTS

### GCP Sentinel (AI Infrastructure Monitoring Agent) GitHub

*Tech Stack: Python • MCP (Model Context Protocol) • DeepSeek AI • GCP APIs • SQLite • SMTP • Pytest • Source Code: github.com/Bharath-kumar-J/gcp-sentinel*

- Built an AI-powered monitoring agent that watches Google Cloud infrastructure through a Model Context Protocol (MCP) server with **15 read-only tools**.
- Implemented deterministic detection rules for CPU, memory, container restarts, OOM kills, Cloud SQL saturation, and load balancer health.
- Integrated DeepSeek AI for root-cause analysis with automatic fallback to heuristic reasoning; developed alert de-duplication with SQLite fingerprinting.
- Achieved **99 automated tests** covering detection rules, MCP round trips, LLM tool-calling loops, fallback paths, and notification rendering.

### Cloud-Native CI/CD Pipeline (DevOps Capstone Project) GitHub

*Tech Stack: Git • GitHub Actions • Docker • Kubernetes (Kind) • Terraform • Flask • Redis • Prometheus • Grafana • Source Code: github.com/Bharath-kumar-J/capstone-devops*

- Built and deployed a containerized Flask application using multi-stage Docker builds and automated GitHub Actions CI/CD pipelines.
- Implemented Horizontal Pod Autoscaler (HPA) to automatically scale Kubernetes application pods based on CPU utilization and simulated traffic loads.
- Integrated Prometheus and Grafana for real-time telemetry, Redis for caching, and managed declarative infrastructure as code using Terraform.

## EDUCATION

### Sathyabama Institute of Science and Technology **Aug. 2019 – May. 2023**

- *Bachelor of Engineering (B.E.) — Electronics and Communication Engineering*
